

Eliot Pechdimaldji

PRODUCT ENGINEER & APPLIED AI · MSC ENGINEERING, ARTS ET MÉTIERS PARISTECH

eliot.pechdi@gmail.com | [linkedin.com/in/eliot-pechdimaldji](https://www.linkedin.com/in/eliot-pechdimaldji) | github.com/eliotpechdi-wq | Paris (open to PACA, Romandy)

SUMMARY

Hybrid engineer, from physical prototypes to AI software. Designed, built and sea-tested a camera mount in one week; now the sole engineer of an AI-built SaaS, which I lead autonomously from scoping to beta. My approach: scope fast, decide what to build first, validate through testing.

EXPERIENCE

studioinnov

since Sep 2026

Lead Product Engineer / Applied AI Engineer

Paris

- Autonomously lead, on both the product and technical sides, a construction-site safety SaaS (prevention, training, work authorisations) as the project's sole engineer: scoping, prioritisation, development, beta and preparation of the first production release.
- Set delivery order by commercial value: sellable mock-up and up-to-date beta first, super-admin features next; choose technical approaches (site translation, message compression).
- Build with AI assistance (TypeScript, Next.js, Supabase, Vercel, Stripe) and validate through behaviour: automated tests, edge-case probing, log monitoring, care over secrets and CI authentication.
- Integrate LLM-based report generation (API key kept server-side); design MCP servers to expose the product as a tool callable by third-party sites (prototype).

Exail

Apr – Sep 2026 · fixed-term contract (6 months)

Prototyping Engineer, cross-functional unit · defence

- Took over about twenty late or stalled projects in six months (from a few thousand euros to €100k): diagnosis of incomplete files, mechanical, hydraulic and electronic studies, build decisions, subcontractors, testing.
- Personally designed and built, in one week from need to sea trial, a compact, rapidly deployable maritime camera mount on a low budget from reused materials; improved it after trials.
- Built a fibre-optic winch prototype in one month: mechanical verification (bearings, materials), assembly, testing and validation after modifications.
- Took part in NATO training missions; fabricated, tested and validated technical tools in a defence environment subject to communication restrictions.

Monaco Marine

Aug 2025 – Feb 2026 · final-year internship (7 months)

Assistant Project Manager, yacht refit

- Handled about twenty refit jobs (€30k to €650k): feasibility studies, surveys, Fusion 360 modelling, subcontractor tendering, quotes; coordination between the client, the workshop, the naval architect and technical management.
- Designed a bow thruster mount with no initial drawings, from on-site surveys, subsequently fabricated and welded; designed the transport cradle and reinforcements in under a week.
- Prepared a twin-engine repower and a keel replacement after a casualty: integration constraints, coordination with the naval architect, the installer and the foundries.

SELECTED PROJECTS

Predictive maintenance ENSAM, 2024

End-to-end Python pipeline written single-handedly (topological data analysis, Random Forest) on a Bosch multi-sensor unit; about 95% correct classification across five simulated operating states.

Racing 92 — microplastic-free infills ENSAM, 2024

Cyclic compression testing, MATLAB analysis pipeline developed single-handedly, 17 substrates compared with the reference; implementation of the blend model proposed by the supervisor, eight candidate combinations.

San Lucia UQ, 2025

Hourly modelling (8,760 h) of a 100% renewable power system; proposed mix of 57 × 5.6 MW wind turbines and 57 MW of solar (376 MW installed, about 80% wind), 97% of demand met in January–February.

Paediatric prosthetic foot ENSAM, 2023

Full CATIA CAD of a PLA-printed foot; group validation through simulation and compression testing, good agreement.

PEIT — water production in North Africa Arts et Métiers

Two-person entrepreneurial project, market study and MVP; final presentation commended by the jury.

EDUCATION

MSc Engineering (Grande École programme), specialisation in innovation and renewable energy Arts et Métiers ParisTech	2022 – 2025
Master of Entrepreneurship and Innovation University of Queensland	2024 – 2025
Preparatory classes for engineering schools (CPGE PTSI / PT*) Lycée Jules Ferry	2020 – 2022

SKILLS

Product & AI: value-based prioritisation, product ownership, AI-assisted development, LLM integration, MCP, automated testing

Software: TypeScript, React, Next.js, Supabase (PostgreSQL), Vercel, Stripe, Python, MATLAB

Engineering: CAD (Creo, CATIA, Fusion 360), prototyping, testing, subcontracting, PLM

Languages: French, English C1 (IELTS 7), Spanish B1 **Sport:** rugby for 14 years (captain five years, coach two years), triathlon, surfing
